

COMMUNICATIONS CONVERGENCE WORKSHOP

Room Science-37 - Ocean Campus

Tuesdays 6-9pm (optional Thursdays 6-9pm hands-on)

CNIT 80X (CRN 51717) \$26 credit or CNIT8080 \$0 non-credit

Increasingly, enterprise networks and support staffs are converging. Previously separate telecommunications, network and IT systems, applications and functions are now frequently operated on shared communications infrastructure, utilizing fiber optics, high-speed LANs, high-speed computing devices and common IP network technologies.

This summer, City College of San Francisco is offering a Communications Convergence Workshop, which will showcase convergence technologies now available for improved operational efficiency and added enterprise functionality. The workshop will cover:

- Fiber Optic Technology 6/6 (& 6/8)
- Metro/Wide Area Ethernet 6/13 (& 6/15)
- Voice over IP (VoIP) 6/20 (& 6/22)
- Video Networking 6/27 (& 6/29)
- Juniper Routing & Security 7/11 (& 7/13)
- Wireless Technologies 7/18 (& 7/20)

Participants are welcome to attend individual sessions or the entire workshop series.

Sessions provide overviews of topic technologies, industries, applications and developments, and they provide opportunities for hands-on demonstrations and interactions. The workshop is a fun, eye-opening occasion to see state of the art convergence technologies in action and learn how and why they are used in modern network environments.
