Media and manuals/handouts given:

Manuals Provided Yes No # Handouts Provided Yes No # Media Provided: Yes No #

Website For Download

The Learning Assistance Center Computer Labs are open to students beginning on the first day of instruction each semester, therefore new software must be provided during the previous semester in order to be tested, installed and available for student use in current semester. New software cannot be installed in the lab during the course of a semester. Unless instructed otherwise, software will be uninstalled from the lab at the end of the current academic year.

Software Installation Permit Guidelines

The LAC Computer Lab will be able to install software requested by an instructor if the following conditions are met:

- Instructor has filled out this **Software Installation Request** (available in the LAC Lab or via download from the LAC web site (<http://www.ccsf.edu/lac>);
- Instructor provides a legal copy of the **software** to the LAC Lab for its permanent possession;
- The software is **licensed** for installation on at least 120 computers in the public access LAC Computer Lab;
- Instructor supplies the copy of the above named site license to the lab with the request form;
- If no site license is available then instructor can obtain the publishing company's written permission to install the software (name and version specified) on 120 computers in the public access Academic Computer Lab and supply a copy of that permission to the lab;
- If only verbal permission from the publishing company is available, the instructor will obtain from the Department Chair, Program Coordinator, or Dean, a signed letter stating that the publishing company allows the software to be installed on 120 computers in the public access LAC Computer Lab free of charge with no site license required;
- The Software Installation Request has to be renewed by the interested instructor **every school year**.
- An instructor needs to contact the LAC Computer Lab with updates to previously installed software; the LAC Computer Lab will not automatically update software.
