

## REGIONAL REPORT: SAN FRANCISCO POPULATION PROJECTIONS

San Francisco population estimates provided by the California Department of Finance project a steady increase in population across most age groups and race/ethnicities through 2030. Conversely, the population of residents between ages 20-34 and Black (Non-Hispanic) residents is expected to decrease over this same time period.

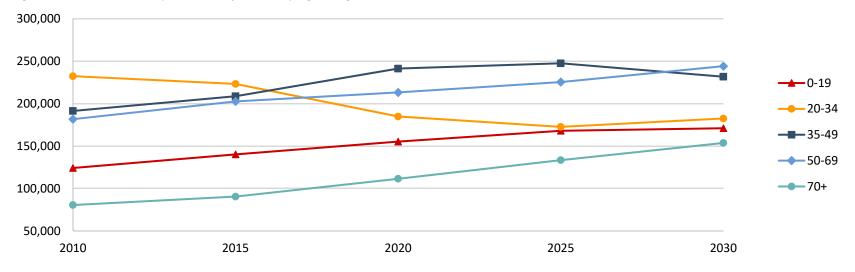

## Population Projections by Age

While San Francisco's population is projected to grow consistently and across most age ranges, the population of residents 20-34 is expected to decline by a total of 49,820 (21.5%), most rapidly between 2015 and 2020 at a rate of 17.2% and slowly beginning to increase again closer to 2030. The most growth is anticipated in residents aged 70+, projected to increase by 73,114, or 90.8%.

## Population Projections by Race/Ethnicity

Population projections through 2030 indicate steady increase in population for most reported race/ethnicity demographic groups. However, the population of Black (Non-Hispanic) residents is expected to decrease from 46,867 in 2010 to 39,455 projected in 2030, a total decrease of 15.8%. People identifying as multiracial are projected to be the fastest growing group, increasing by 14,103 or 56.8% between 2010 and 2030.
